

Energy in Data Workshop 2021

Digital Journey - Lessons captured to invoke the next frontier of innovation

22–23 February 2021 ▪ 8:00 AM–1:00 PM each day ▪ Virtual

Workshop Description

Industry 4.0 revolution has changed the traditional business landscape. Automation, connectivity, and intelligence are driving the digital transformation of various industries. The convergence of information technology and operations has led to the emergence of cyber physical systems, which have permeated every aspect of our lives.

Let the E&P experts share their experiences during the conceptualization, development, and deployment of digital products and data-driven solutions that have created real-world impact in the upstream oil and gas industry. Unlike a traditional conference presentation, the immersive sessions will allow deeper and insightful interactions with the experts and peers. The experts will share the challenges and lessons learned when developing and deploying technology products that are currently being used in day-to-day operations, which include finding partners, collaborators, and developers to get started with digitalization along with the pitfalls and uphill struggles on the way to creating impact through the digital transformation. Sessions will include demos and expert-led group activities to allow new ideas to take root.

BECOME A SPONSOR
